Election/Restriction

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Species A, claims(s) 7-9, drawn to a displacement measuring apparatus comprising displacement operation means comprising preadders, adder, subtracter, and a divider.

Species B, claims 11-12, drawn to a displacement measuring apparatus comprising processing means comprising a deviation detection means and a correction value storage means and a scan initiation detection means and a counting means.

Species C, claim 13, drawn to a displacement measuring apparatus comprising processing means comprising a calibration mode and a measurement mode.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

Art Unit: 2877

are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Species A (claims 7-9)
Species B (claims 11-12)
Species C (claim 13)

The following claim(s) are generic: 1-6, 10 and 14-15.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Species A deals with a specific displacement operation means, Species B deals with a specific deviation detection means an a correction value storage means, and Species C deals with a calibration mode and a measurement mode.

Examiner notes the requirement of unity of invention shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features and the "special features" shall mean those technical features that define a contribution which each of the claimed inventions, considered as a whole, ***makes over the prior art***. As shown by the JP 10-300420 reference provided by the applicant, "the special features" which appeasers to be the lens array does not overcome the prior art. Each of Groups contain limitations which might overcome the prior art but the mere limitation of the lens array does not overcome the prior art.

Furthermore, examiner notes that claims 1-6, 10 and 14-15 will be treated as "generic claims".
